

AXIS SERIES | LASER SENSORS

Fast and high-precision sensors, based on the triangulation principle with an excellent price-performance-ratio

- AXIS-MI: Miniature laser triangulation sensors with integrated electronics
- AXIS-P: Performance laser sensors - powerful sensors for factory automation
- AXIS-HP: High-Performance sensors - for high-precision quality testing
- AXIS-LR: Long-Range sensors - for long measuring ranges

The digital laser sensors of the AXIS series measure the distance or the position of an object in a highly reliable, non-contact and wear-free manner. The triangulation principle is used to measure the distance or position of the target. The sensor emits a laser beam which is reflected by the target. Through a lens the reflected light hits a highly sensitive CMOS sensor at a defined angle. A change of the distance to the measuring object causes a change of angle and thus also a shifting light spot on the CMOS sensor. From this the distance to the measuring object is calculated. Thanks to an integrated controller, the sensor automatically adapts to different materials. Stable measurements on difficult or changing surfaces are thus possible. Depending on requirements, AXIS series sensors are available in different sizes and ranges.

Miniature sensors

Small and lightweight designs with high precision	AXIS-MI		<ul style="list-style-type: none"> 10 mm 104 mm
	AXIS-MI		<ul style="list-style-type: none"> 50 mm 300 mm 500 mm

Performance sensors

Powerful sensors for factory automation	AXIS-P		<ul style="list-style-type: none"> 40 mm 100 mm 250 mm 500 mm 800 mm
	AXIS-P-800		

High-Performance sensors

Sensors with measuring accuracy in the sub-micro-meter range	AXIS-HP SHORT-RANGE		<ul style="list-style-type: none"> 40 mm 100 mm 200 mm
	AXIS-HP MID-RANGE		<ul style="list-style-type: none"> 500 mm 900 mm 1350 mm

Long-Range sensors

For distances of up to 13 meters	AXIS-LR LONG-RANGE		<ul style="list-style-type: none"> 3,8 m 13 m
